

SYSTEM AND METHOD FOR COMMUNICATING USING A FRAMEWORK

ABSTRACT OF THE DISCLOSURE

A method is provided that includes: receiving, by a framework, a request communicated by a source, the request including an associated functionality. The method also includes integrating, by an abstraction layer, a java object into the request such that a generic term associated with the request is generated. The generic term is insulated from the functionality of the request. The generic term is processed within the framework and a response associated with the request is returned to the source.
